Predmet: Vyrokova a predikatorova logika

Ukol: 9. Verze: 1.

Autor: David Napravnik

\mathbf{a}

```
definujme funkci cdot(a,b) = a \cdot b \{x | (\exists y)(\forall z)((x = cdot(y,y)) \land (\neg(z=0) \Rightarrow \neg(0 = cdot(z,x))))\} (x = cdot(y,y)) \dots nam zaruci kladny vysledek (vcetne nuly) \neg(z=0) \Rightarrow \neg(0 = cdot(z,x)) \dots nam vylouci nulu
```

b)

 $\{holic|(\exists holic)(\forall holeny)(holi(holic, holeny) \Rightarrow \neg(holic = holeny))\}$
